

TIKTOK CONTENT POSTING API AUDIT

Post Social

Direct Post UX mockup

Post Social lets creators and businesses schedule and publish original content across social networks from one place.

REVIEW FLOW

- 01 Connect**
Genuine TikTok OAuth
- 02 Compose**
Creator-aware settings
- 03 Approve**
Explicit human consent
- 04 Publish**
Upload + status polling
- 05 Confirm**
Platform result + live link

Connect the creator's TikTok account

Post Social uses OAuth only. The creator sees TikTok's genuine consent screen and returns with their identity visible.

● Post Social · Connections

ACCOUNTS

Your publishing connections

Aki Creates

@akicreates · TikTok

CONNECTED

+ Connect TikTok

1 user.info.basic

Used after consent to show the creator nickname and confirm which account receives the post.

2 No password access

TikTok returns scoped OAuth tokens. Post Social encrypts them server-side and never exposes them to the browser.

3 Cancellation is safe

If the creator cancels OAuth, no account or credential is stored and the app explains what happened.

Prepare original creator-selected content

The creator chooses media, copy, destination, and timing. Preset text stays editable before anything is transmitted.

● Post Social · Create

Make something worth sharing

MEDIA

Drop an MP4 or choose a file

Validated against creator limits

CAPTION

Behind the scenes from this week's shoot.

Editable · 47 / 2,200

TT

Aki Creates · selected destination

1 Creator-selected media

Post Social is an original-content workspace—not an automatic scraper or blind reposting tool.

2 File validation

MP4/H.264, up to 1 GB, with duration checked against `max_video_post_duration_sec`.

3 Nothing sent yet

Choosing a file and drafting copy do not call `video.publish`. Transmission waits for explicit approval.

Honor every creator-specific posting option

Post Social queries creator_info when the composer opens and renders only the privacy and interaction choices TikTok returns.

Posting capacity available · max 10:00

WHO CAN VIEW THIS POST?

Choose privacy — no default

INTERACTIONS · OFF BY DEFAULT

Comments

Duet unavailable

Stitch

CONTENT DISCLOSURE · OFF

By posting, you agree to TikTok's Music Usage Confirmation.

1

No default privacy

The creator must actively choose from privacy_level_options returned for this exact account.

2

Availability respected

Comment, Duet, and Stitch remain off; unavailable choices stay disabled with an explanation.

3

Disclosure controls

Your Brand, Branded Content, and AI-generated indicators are carried into the Direct Post request.

Require explicit human approval

The Approval MVP uses Confirm Each. An upload or agent-created draft cannot publish until a person approves the final proof.

● Post Social · Final proof

WAITING FOR APPROVAL

Original content · Music confirmation shown

Approve & publish

Return

1 Active confirmation

The approval button records the user, timestamp, destination, selected options, and consent moment.

2 video.publish fires here

Only after approval does Post Social initialize TikTok Direct Post and begin the chunked upload.

3 Agent-safe policy

API or MCP callers may draft, but Confirm Each still routes the final post to this human review card.

Show the platform-confirmed result

Post Social stores TikTok's publish ID before polling, checks status without duplicate uploads, and shows a live link only after PUBLISH_COMPLETE.

● Post Social · Activity

PUBLISH_COMPLETE · request ID retained

Open live post ■

If TikTok fails, this area shows a sanitized reason and a safe retry state instead.

1 Status polling

Post Social checks status/fetch within TikTok's rate limit until complete, failed, or timed out.

2 No false success

The UI never marks a destination published from an upload response alone; TikTok must confirm it.

3 User-controlled access

Disconnect removes the encrypted credential, cancels queued work, and prevents future publishing.
